

Autorobot in the Walk of Fame in Hollywood, California

Network Auto Body Inc. (www.networkautobody.com) has been proudly serving the greater Los Angeles area, Hollywood, Bel Air, Beverly Hills, West Hollywood, Santa Monica and the San Fernando Valley since 1985. The prime location between Sunset and Hollywood Boulevards shows that the business is booming. In addition to the Hollywood location, Network Auto Body Inc. has another location in the City of Temecula and is building a third shop in North Hollywood with the grand opening scheduled for January 2nd, 2008.

Richard, Manny and Rocco; Manager, Technician and Owner - all benefit from Autorobot's quality products.

Mr. Rocco Fasone, the owner of Network Auto Body Inc., describes the success of his operations in Hollywood. "Network Auto Body performs all unibody, body, and refinishing and all work is covered by a unique lifetime warranty. I have highly trained and qualified technicians in my body shops and they use only the latest and most modern technology and equipment available in this industry. We do about 200 jobs a month and we get a chance to meet people from all walks of life, including Walk of Fame personalities and we treat everyone as a celebrity. The main reason for me using Autorobot's unibody straightening benches and measuring systems is to ensure safe and proper repairs, which is paramount in restoring our customers' vehicles. Another reason, simply put, is that aside from Autorobot producing quality results, it's a time saver. There is no faster and more versatile straightening unit than Autorobot XLS. That's why I have selected Autorobot – it all can be seen on the bottom profit line and expansion of the business".

Mr. Richard Neubauer, Production Manager for Network Auto Body Hollywood, continues. "I need to ensure the quality and smooth flow of the repairs.

It is vital that the technicians have the best tools and state-of-the-art equipment. We also have a good retention program by providing fair pay and compensation – we have a technician who has been with us for over 19 years and others with more years than expected in this industry because of the high turnover rate. Autorobot straightening benches are ideal in many ways; the set up time and anchoring speed compared to any other bench is unrivaled, the open structure allows easy access to every part in the vehicle and work ergonomics is best in the industry. We use Autorobot XLS benches with 300+ measuring instruments from Autorobot. This combination helps ensure a steady work flow and also a peace of mind knowing that Autorobot has eliminated any potential problems"

The technicians; Martin, Alberto, Nacho and Manny agree with Rocco and Richard. "We are long-time employees of Network Auto Body and we enjoy working here. Using the Autorobot XLS and measuring equipments is easy and fast regardless if the vehicle is a large SUV or a small car. The results are reflected in the pay checks immediately. But even more important is that by using Autorobot benches, we stay in top physical shape and quality of life is improved. We don't feel tired after putting in a hard day's work. We feel that Autorobot has given us additional years to continue working and to enjoy life fully."

Autorobot Finland is developing, manufacturing and marketing latest technology collision repair equipments world-wide through the dedicated distribution networks. In California/Los Angeles Autorobot has factory approved service and training centre at:

Young International
8560 Tujunga Avenue, Sun Valley, CA 91352
